INTRODUCTION

THE GLOBAL AI DIALOGUES

ABOUT THE GLOBAL AI DIALOGUES

The Global AI Dialogues are a workshop series that invites residents around the world to engage, discuss, and contribute their perspectives on the topic of Artificial Intelligence (AI).

It is organized by the Technical University of Munich together with local partners. The project is co-funded by the nonprofit association “Institute of Electrical and Electronics Engineers (IEEE)”. Each workshop offers the opportunity to both get introduced to the topic of AI and gain deeper knowledge about AI application fields, specifically **Generative Artificial Intelligence** and **Facial Processing Technologies**.

genAI

Generative Artificial
Intelligence

FRT

Facial Processing
Technologies

ABOUT THIS DOCUMENT

This document is targeted at **facilitators** and **group supporters**. It provides facilitators guidance and additional explanations of the worksheets. It also lists guiding questions for taking notes during the group dialogues. It is best to print out this document on DIN A4 or a comparable format in order to provide facilitators sufficient space for note taking.

WORKSHOP MATERIALS: WORKSHEETS ON THE CONTEXT OF genAI

All worksheets displayed in the explanations are to be printed out on DIN A3 or a comparable format.

– *Worksheets on the context of FPT to be published with the final version of this document* –

FACILITATOR ROLES

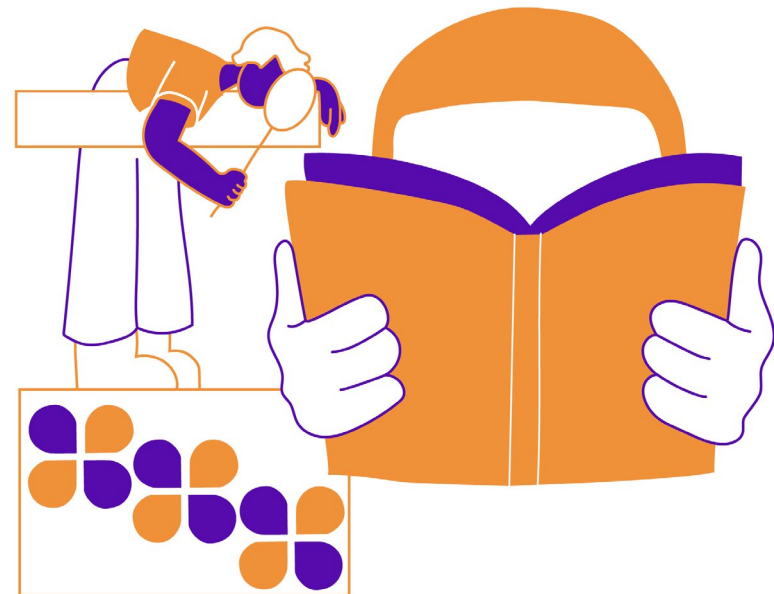

In this document, we will distinguish different roles. The main role that this document targets are group supporters, meaning those individuals who support and observe the groups in their dialogues.

MAIN FACILITATORS

The main facilitators have the role of implementing the overarching structure and paying attention to the larger time frame. They are also responsible for paying attention to the survey interventions taking place properly in the groups, the collection of all surveys after the dialogue and the documentation of the payment of the participants at the end. Main facilitators might also delegate these tasks to other staff members after adequate introduction to the task.

Main facilitators also assume the role of event hosts and welcome the participants, explain the context of the event and give an overview of the event's processes. They moderate plenary discussions and close the event at the end.

GROUP SUPPORTER (& OBSERVER)

The group supporters have the role to support the groups in their dialogue throughout the entire workshop. It is important that they do not participate in the group discussions themselves but rather provide a soft guidance and observance of the processes.

The main tasks are:

1. to support the group in the workshop processes, meaning, to explain the worksheets and the methods/procedures.
2. to observe the groups and to quietly take notes of the participants' dialogues.

The purposes to the two tasks are

- to ensure, that the groups can properly navigate through the workshop process and every group member understands the procedures correctly
- to ensure that the arguments put forward by participants are documented on Post-its or on the worksheets. This includes also ensuring that Post-its are not moved from one worksheet to another, but instead re-written or summarized on the new poster. Thereby, we can guarantee that the group dialogue are best documented and can be analyzed afterwards.
- to take note of the “why”, i.e., why do participants argue in a certain manner or why have participants assessed a specific consequence in a certain manner. The reason for documenting

the “why” is that, in group processes, often only the result of a brief dialogue is written down, not the reasoning that led to that result. This would likely slow down the group process. Therefore, documenting the “why” becomes the central purpose of the note-taking task of the group supporter.

In general, the group supporter should note that this is a dialogue. This means that technical knowledge levels of participants are not decisive for participation. Instead, the distinct perspectives of the individual participants and experiences should be at the center of the dialogue.

VISUAL DOCUMENTATION/ PHOTOGRAPHER

This role includes taking pictures and short video clips to document the workshop process. This role can be taken by a photographer or by (several) staff members (facilitators/group supporters).

WORKSHOP OVERVIEW

🕒 TOTAL DURATION: ~5 h 35 min

INTRODUCTION & SURVEY

Step – 01 WELCOME & INTRODUCTION TO THE GLOBAL AI DIALOGUES	8
🕒 15 min	8
Step – 02 SURVEY (PART 1)	8
🕒 10 min	8
Step – 03 INTRODUCTION TO AI INTRODUCTION TO GENAI INTRODUCTION TO FRT	8
🕒 20 min	8
Step – 04 GROUP INTRODUCTION + TRYOUT: POSTER 1	9
🕒 35 min	9
Step – 05 CODE OF CONDUCT: POSTER 2	11
🕒 5 min	11

☕ FLEXIBLE BREAK

🕒 10 min

MAIN TOPIC OF DISCUSSION

Step – 06 DATA CARDS/SCANNING TOPICS & WHAT IF?: POSTER 3	12
🕒 10–15 min	12
Step – 07 CONSEQUENCE MAPPING: POSTER 4 RISK IMPULSE CARDS	13
🕒 25–35 min	13
☕ LUNCH BREAK	50 min
Step – 08 IDENTIFYING OPPORTUNITIES, THREATS & AIMS: POSTER 5	15
🕒 5 min	15
Step – 09 ASSESSING PROBABILITIES AND IMPACT: POSTER 6	16
🕒 15 min	16

Step – 10 STAKEHOLDER MAPPING: POSTER 7	17
🕒 30 min	17
☕ BREAK	10 min
Step – 11 BACKCASTING: POSTER 8	19
🕒 40 min	19

ENDING THE WORKSHOP: SURVEY & GROUP PRESENTATIONS

Step – 12 SURVEY (PART 3)	20
🕒 15 min	20
Step – 13 GROUP PRESENTATIONS	20
🕒 20 min	20

INTRODUCTION & SURVEY

🕒 TOTAL DURATION: ~45 min

Step – 01

WELCOME & INTRODUCTION TO THE GLOBAL AI DIALOGUES

GUIDANCE:

🕒 15 min

Overview – The main **facilitator/organizer** welcomes the participants and introduces the Global AI Dialogues to the participants.

Step – 02

SURVEY (PART 1)

GUIDANCE:

🕒 10 min

Overview – As part of the plenary introduction, participants take the first part of the survey.

Step – 03

INTRODUCTION TO AI INTRODUCTION TO GENAI INTRODUCTION TO FRT

GUIDANCE:

🕒 20 min

Overview – The **(main) facilitator** introduces AI, genAI and FRT to participants.

Step – 04

GROUP INTRODUCTION + TRYOUT: POSTER 1

GROUP SUPPORTERS' FACILITATION GUIDANCE:

⌚ 35 min

Overview – After being welcomed to the workshop and introduced to the respective technology (genAI or FPT) in the plenary by the main facilitators, participants are sent to their group tables. Here they start with an survey investigating what touchpoints they have with the technology. Then, they engage in an introduction exercise to break the ice. After the ice breaker, groups try out genAI applications.

[2 min] Convene at tables.

[2 min] The **group supporter** briefly introduces his/herself and explains his/her role in the dialogue.

[1 min] The **group supporter** highlights the importance of each individual perspective. Each perspective is influenced by personal experience. The diversity of experiences is valuable when discussing about how a socially sustainable future could look like.

[5 min] **SURVEY (PART 2):** Before moving on to the next step, the group supporter asks the participants to individually fill out the next part of the survey. The survey serves as a tool for self-reflection on touchpoints with the technology, and actors likely influencing the perception of AI.

[8 min] Then **poster 1** is introduced. First, each participant briefly introduces his/herself and why he/she attends the workshop. Second, participants share touchpoints from the individual survey by locating themselves dot or by drawing a cross. The location indicates their y-axis and how they perceive the influence of the technology on society on the x-axis.

[2 min] The **group supporter** asks the group, if one person can volunteer for ensuring that perspectives are documented in written form. The group supporter also clarifies that everybody should still be engaged in documenting the process.

Poster 1

A TRYOUT SESSION FOR *genAI*

[15 min] The **group supporter** asks the group, to create a greeting card for other international workshop groups. Ideally, tablets or laptops can be provided by the hosting institution for this task (1 device per group is sufficient).

The task is to **create a short text using generative AI** (e.g. Duck Duck Go AI Chat):

<https://duckduckgo.com/?q=DuckDuckGo+AI+Chat&ia=chat>) describing the groups favorite or secret spots in the city the workshop is taking place.

To complement the text with an image, the group is encouraged to use **image generation AI** (e.g. Deep Dream Generator: <https://deepdreamgenerator.com/generate>).

Group supporters should encourage group members with little or no experience with generative AI applications to try it (if they want), so everybody in the group gains a little experience with these types of systems. Group supporters should save text and image pairs after the exercise.

B TRYOUT SESSION FOR *FRT*

[15 min] The group facilitator guides to group to explore the functioning of facial detection, facial categorization, and facial verification. The group should test whether they can fool the FRT tools and question their accuracy:

[5–8 min] facial recognition:

<https://ki-menschlich.netlify.app/gesichter-erkennen/>

Task: – Jointly upload/capture (by showing the printed pictures to the laptop's camera) two of the pictures by a famous person (e.g. actress) most people in the respective country should know → What is the matching score by the system if you/the participants put the third picture in front of the camera or present your own/their face?

[10-12 min] facial categorization:

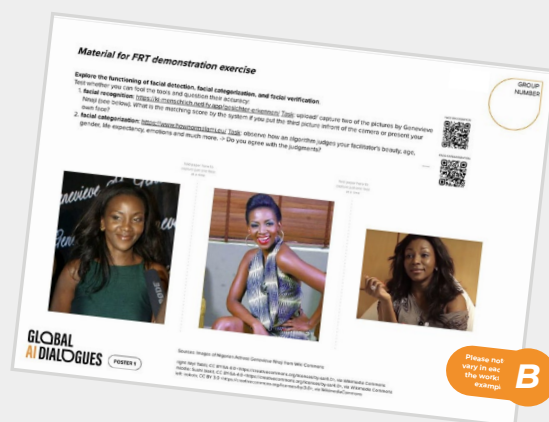

<https://www.hownormalami.eu/>

Task: – Participants shall observe how an algorithm judges your beauty, age, gender, life expectancy, emotions and much more. → Do participants agree with the judgments?

⚠ Important: This demonstration should not be done by participants but rather only be demonstrated by you as facilitators, if you agree. At the very end, it estimates one's life expectancy. Participants must not try out this exercise as part of the dialogue. Scientifically, these types of technologies (face categorization) are extremely contested, but still applied by industry. Therefore, the demonstration must be handled with care and it must be properly contextualized that these systems have limited to no validity.

Additional Material
for FRT

Step – 05

CODE OF CONDUCT: POSTER 2**GROUP SUPPORTERS' FACILITATION GUIDANCE:**

⌚ 5 min

Overview – After the group introduction, participants define their code of conduct. First, the participants discuss group rules using **poster 2.1**. Then, the code of conduct on **poster 2.2** is read out aloud. If the group agrees that no item is missing, the group proceeds to the next poster.

- [1 min] The **group supporter** highlights the importance of everyone's perspective, for example, by saying: "Given the importance of the topic and the incredible diversity of experiences and perspectives gathered here in this room and at this table, we believe it is important to set ground rules for our dialogue today. We want to ensure that everyone's views can be heard and that we have the opportunity to consider alternative ideas and perspectives. Let's start with establishing some rules for the day together."
- [2 min] The **group supporter** presents **poster 2.1** with group rules for the participants to fill out. The group supporter poses the two questions and takes notes on the participants' contributions, or a participant takes notes. The **group supporter** ensures that each perspective is considered.
- [2 min] Then, the group supporter presents **poster 2.2** with the code of conduct and reads the points. The moderators ask the group if an aspect is missing.

**FLEXIBLE BREAK**

⌚ 10 min

🕒 TOTAL DURATION: ~35 min

DATA CARDS/SCANNING TOPICS & WHAT IF?: POSTER 3

🕒 10–15 min

[8 min] The **group supporter** briefly introduces every data card. News articles that cover the content of the card in more detail are also handed out to the participants. The **group supporter** clarifies questions that participants may have on particular data cards/topic areas.

[7 min] After they have learned about the content, participants shortly discuss what is most interesting to them and vote on the data card the group will focus on from now on. **Group supporters** should make sure that the group marks the chosen data card clearly on the worksheet.

Step – 07

CONSEQUENCE MAPPING: POSTER 4

GROUP SUPPORTERS' FACILITATION GUIDANCE:

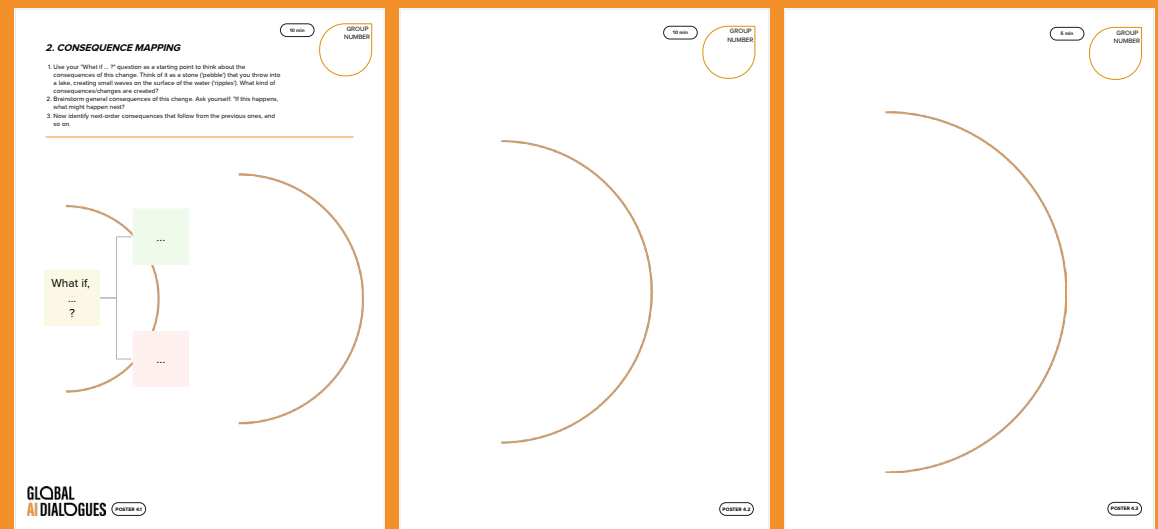

⌚ 25–35 min

Overview – Every data card comes with a “What if ...?” question attached below. These questions ask what would happen in case the respective technology is established in the respective application context. Taking the “What if ...?”-question as a starting point, the group now thinks about the consequences of this new status quo. Brainstorming consequences means to constantly ask: “If this happens, what might happen next?” The **group supporter** should ensure to always ask what other side a particular consequence could also have (opportunities vs. risks). If available, positive consequences can be mapped using green sticky notes, while negative ones can be represented using red sticky notes.

An important task for the **group supporter** is to nudge groups to go even further than the first two layers (“ripples”) of consequences by constantly asking, “what could happen next?”

[10–15 min] The **group supporter** explains that the groups should use the created impulse (based on “What if ... ?” questions) as a starting point to think about the consequences of this change. Participants can think of the consequences as a stone (“pebble”) that they throw into a lake, creating small waves on the surface of the water (“ripples”). What kind of consequences/changes are created? Participants should brainstorm general consequences of the identified change. Participants should ask themselves: “If this happens, what might happen next?” Participants should identify next-order consequences that follow from the previous ones, and so on.

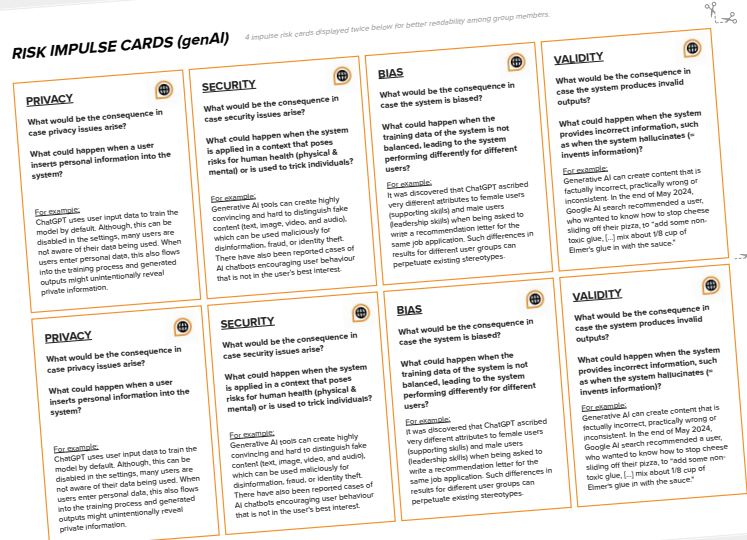

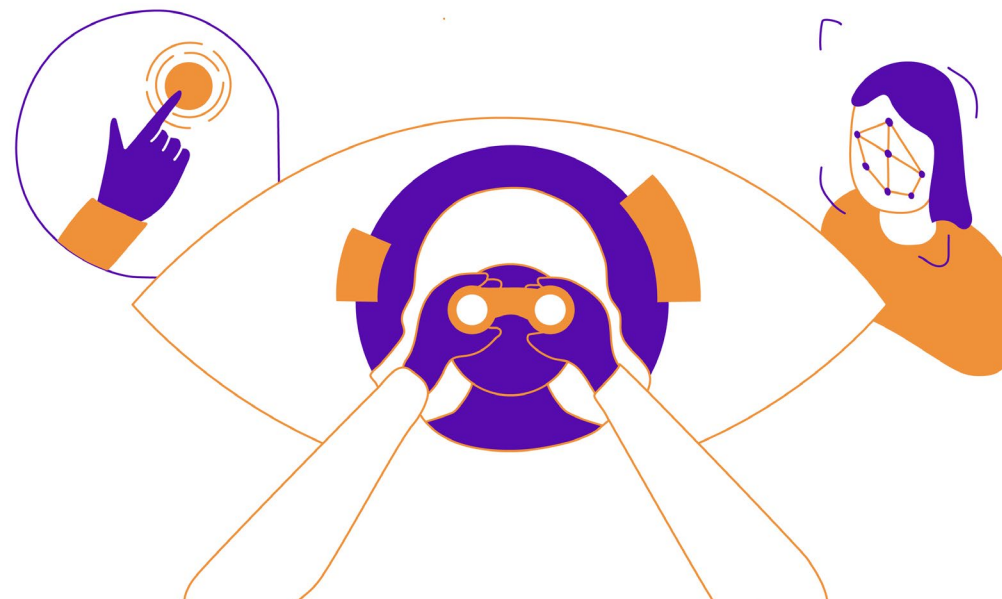

Note: This task is not about agreement on all of the identified consequences. Rather, it is about thinking about a breath of consequences that could arise.

Poster 4

[10 min] The risk impulse cards are introduced by the **group supporter**. These cards contain specific questions that can be applied to the consequence mapping, questioning certain consequences and leading to the emergence of new ones. For example, one could use the “Bias”-card to ask, what would be the consequence at this point (at a certain consequence already mapped) when the system is biased?

Note: It is not important that participants memorize the details of a particular risk impulse cards. Instead, they should obtain a general understanding of the scope of (potential) risks and reflect whether they could have an effect on the previously identified consequences.

LUNCH BREAK

⌚ 50 min

Step – 08

**IDENTIFYING OPPORTUNITIES,
THREATS & AIMS: POSTER 5****GROUP SUPPORTERS'
FACILITATION GUIDANCE:**

⌚ 5 min

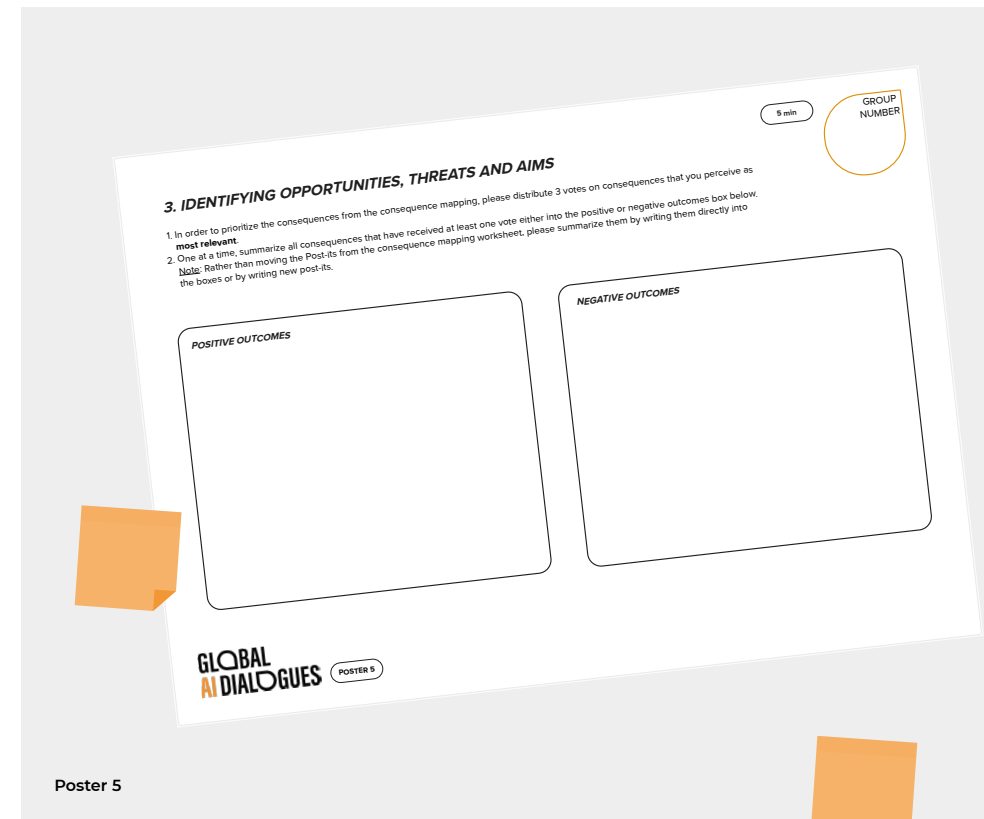

Overview – In this step (**poster 5 and 6**), groups select potential risks and benefits that are most important to them. They jointly assess the benefits and risks. This assessments builds the foundation for the formulation of an overall aim (**poster 7**) that they want to strive for regarding the use (or ban) of the respective technology in the respective context they chose to discuss.

[2 min] In order to prioritize the consequences from the consequence mapping, the **group supporter** distributes 3 or 4 votes (sticky points) to each of the participants (in case of larger groups, participants receive less votes; in case of smaller groups, participants receive more votes).

Participants use them to vote on consequences (multiple voting on same consequence

[3min] One at a time, participants summarize all consequences that have received at least one vote either into the positive or negative outcomes box on the poster.

Note: Rather than moving the Post-its from the consequence mapping worksheet, the **group supporter** should ensure that the Post-its are summarized by participants by writing them directly into the boxes or by writing new Post-its.

Poster 5

Step – 09

ASSESSING PROBABILITIES AND IMPACT: POSTER 6

GROUP SUPPORTERS' FACILITATION GUIDANCE:

15 min

Overview – After summarizing the identified consequences, the group should start to assess them. The order of assessing the individual consequences does not matter.

[15 min] For the positive outcomes, the group should assess the “opportunity size”/“impact” and “probability of occurring”/“likelihood”, using the coordinate system below. Participants should think about the impact for an individual as well as for society. After assessing a positive outcome, participants should also document on the worksheet **why** they allocated a certain outcome in the specific box. Consequences assigned to the top right corner have the largest positive impact and are most likely to occur. The group should perform the same assessment also for the negative outcomes. Participants should think about the impact for an individual as well as for society. After assessing a negative outcome, participants should also document on the worksheet **why** they allocated a certain outcome in the specific box. Consequences assigned to the top right corner have the largest negative impact and are most likely to occur.

Note: Start with the consequences that have received the most votes. Rather than moving the Post-its from the summary worksheet, the **group supporter** should ensure that the Post-its are re-written directly into the boxes or new Post-its.

Step – 10

STAKEHOLDER MAPPING: POSTER 7

GROUP SUPPORTERS' FACILITATION GUIDANCE:

⌚ 30 min

Overview – In this step, first an aim is defined based on the previously assessed benefits and risks. Using the “actantial model”, the group then illustrates a network of stakeholders, hurdles and favorable factors, and explores their relations.

[5 min] Considering the assessment of positive and negative outcomes assessed on **poster 6**, now, participants should think of an aim that societies dealing with the application of the respective technology should strive for. Participants should ask themselves what the overall goal would be if they tried to achieve the positive outcomes while trying to mitigate the negative outcomes.

Note: It is not imperative that the aim involves technology. The **group supporter** should mention that also non-technical aims may be a feasible solution, e.g., “Please note that the application of the technology is not a must when thinking about the aim” (also written on the worksheet).

BREAK

⌚ 10 min

THE LEADING QUESTIONS FOR EACH POSITION CAN HELP FACILITATE THE PROCESS:

1. AIM / OBJECT (OF DESIRE):

In the context of your application area, what aim should societies dealing with genAI strive for? – Here you can copy your post-it from the step before.

2. RECEIVER:

Who or what aspects of society benefit from achieving the aim?

3. RESPONSIBLE ACTORS / SUBJECT(S):

Who, in your eyes, is mainly responsible for the actions and measures that ensure the aim is achieved?

4. ACTIONS & MEASURES / HELPER(S):

What are the actions and measures that can help to achieve the goal? Also, who could help to take those actions?

5. HURDLES / OPPONENT(S):

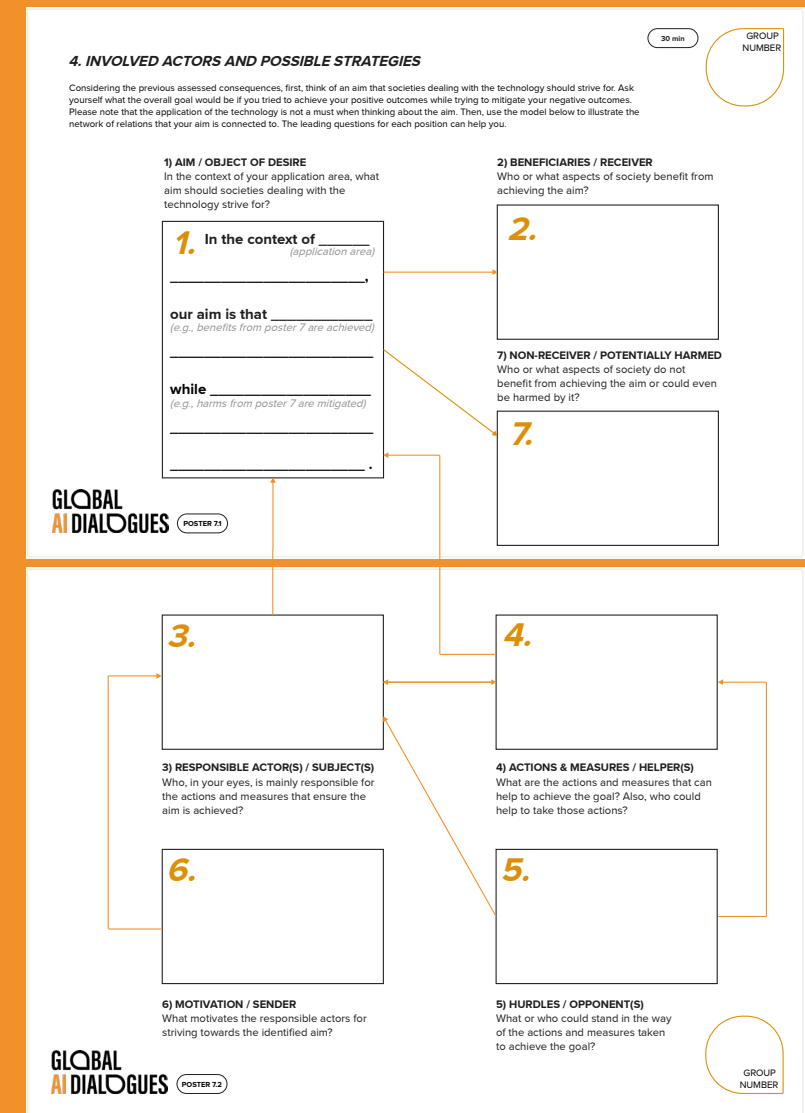

What or who could stand in the way of the actions and measures taken to achieve the goal?

6. MOTIVATION / SENDER(S):

What motivates the responsible actors for striving towards the identified aim?

7. NON-RECEIVER / POTENTIALLY HARMED:

Who or what aspects of society do not benefit from achieving the aim or could even be harmed by it?

Poster 7

Step – 11

BACKCASTING: POSTER 8**GROUP SUPPORTERS' FACILITATION GUIDANCE:**

⌚ 40 min

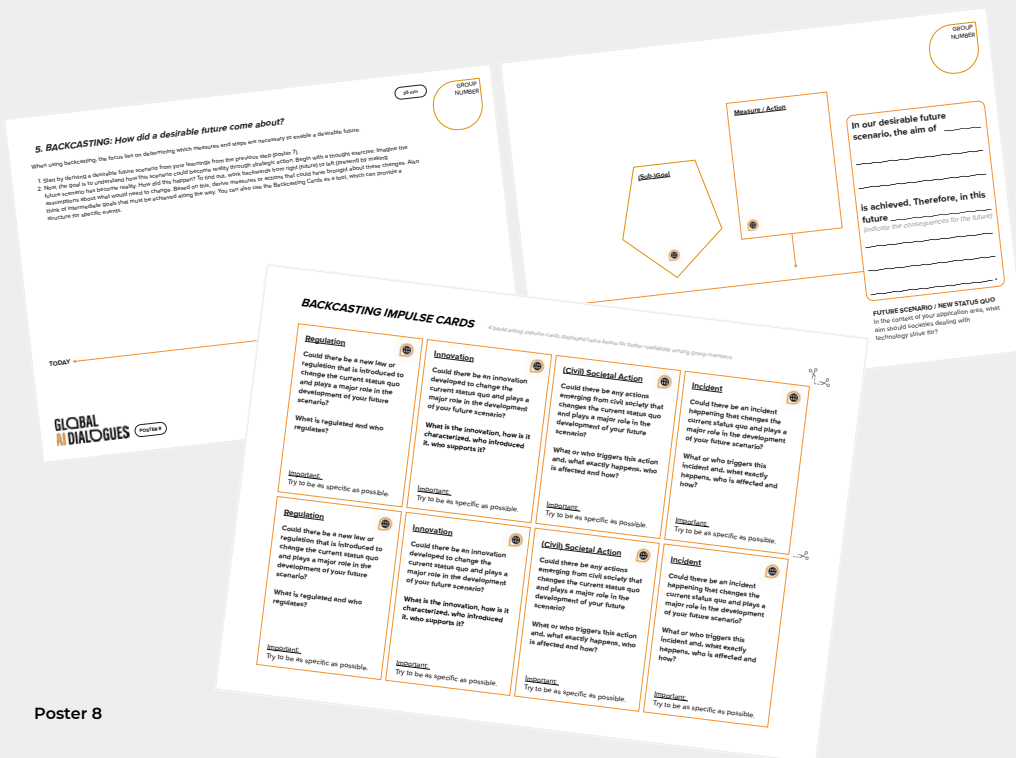

Overview – This final task serves as a deep dive into the previously outlined measures. First, the group sharpens a future preferable scenario reflecting the previous discussions and the previously outlined aim. Then, the group thinks backwards from that scenario and considers measures necessary to achieve the scenario.

[8 min] The group starts by deriving a desirable future scenario from their learnings from the previous step (**poster 7**) making use of the pre-framed sentence structure indicated on the poster.

[30 min] Then, the goal is to understand how the defined future scenario could become reality through strategic action. The **group supporter** introduces a thought exercise: Imagine the future scenario has become reality. How did this happen?

To find out, the group works backwards from right (future) to left (present) by making assumptions about what would need to change. The example questions on the backcasting impulse cards can help by providing a structure for the different types of actions or measures, i.e., regulation, innovation, (civil) societal action, incident, that could play a role. Inspired by the cards or independent of the cards, the group derives measures or actions that could have brought about the changes leading to their future scenario. The group should also think of intermediate goals that must be achieved along the way

[2 min] For the final presentation of the group work, the group should nominate one or a few participants (or the **group supporter**) to briefly share (2 min) the outcomes from this final step with the other groups.

Poster 8

ENDING THE WORKSHOP: SURVEY & GROUP PRESENTATIONS

🕒 TOTAL DURATION: ~35 min

Step – 12

SURVEY (PART 3)

GROUP SUPPORTERS' FACILITATION GUIDANCE:

🕒 15 min

Overview – After the group has completed the dialogue on measures to achieve a desirable future scenario, participants take the third part of the survey.

Step – 13

GROUP PRESENTATIONS

GROUP SUPPORTERS' FACILITATION GUIDANCE:

🕒 20 min

Overview – To wrap-up the dialogue, each group presents the desirable scenario that the group defined and the key measures that are necessary to achieve the desirable future scenario.

GLOBAL AI DIALOGUES

Supported by:
